

Gentlemen: While I understand the PLC possibility for high speed broadband, I also understand the awful HF noise generated by the same. I have been fighting the local Power company for a "noisy transformr" that according to them, is working just as it was designed. Now We hams get to put up with more noise from our power companies from PLC!!!! This is a BAD idea. They will not care anymore about the interference's to amateur radio as they do about "noisy arcing transformers. Money!, that is all they care about. Now with all the severe weather across the country, cell phones are overloaded and the areas that do have power can QRM hams attempting to advise others of the well being or other traffic while they have to contend with PLC.. BAD Idea..... Thanks Gerald Ditmore
